Delta High-Speed Motion Control System

www.importsnab24.ru

Introduction to DMCNET**

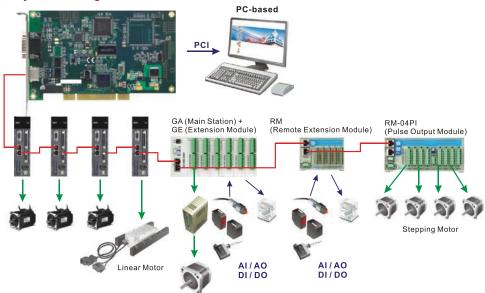

In response to positive market feedback on the ASDA-A2 series AC servo motors and drives, Delta has launched its brand-new, high-speed and cost-effective PCI-DMC-A01 motion control card which provides high performance and extended functions for multi-axis motion control. With the aid of the high precision and high functioning ASDA-A2-F series that features a 20-bit level resolution encoder, Delta provides an optimum motion control system for meeting the demanding requirements of a wide variety of industry applications.

Delta's new PMCNET* motion control card facilitates motion control via communication. It is easy to set up, has good extension abilities and no extra I/O card is required. The commands are delivered with no pulse delay. The synchronization it achieves enhances the stability and efficiency of the system.

EMENET* is a high speed and real time communication system, capable of controlling up to 12 axes of servo system units within 1ms simultaneously. It can accept double precision floating point values 64-bits wide and provide up to 1,280,000 pulse/rev resolution so the servo system can make accurate calculations and provide operation flexibility. 35 homing modes are provided. 12 servo system units or 4 groups, 3-axis helical and linear interpolation or 6 groups, 2-axis linear and arc interpolation can be implemented synchronously. It also supports absolute commands, incremental commands, T-curve / S-curve velocity profiles, built-in position, speed and torque control modes for different uses. Simply by connecting the EMENET* to servo motors, linear motors, digital inputs and outputs (DI/DO), analog inputs and outputs (AI/AO) and other control devices such as stepping motors and manual pulse generators (MPG), enabling fast and cost-effective communication and control is easy.

EMENET is the best integrated platform for multi-axis and synchronous motion control in a wide range of machine tools and industrial applications. It is also the ultimate solution that provides effortless wiring, enhanced stability, flexible extension capabilities and versatile operation for industry upgrading and adding value to products.

System Configuration

Stepping Motor

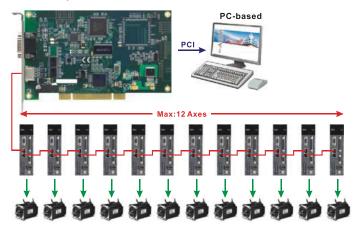

Features

High Integrated Capability

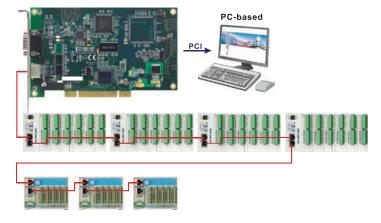

- With DESCRIPT™ networking structure, multiple control devices such as servo motors, remote digital and analog modules, stepping motors, elevator door control motors (VFD-DD series), and linear motors can be easily and quickly connected.
- ▶ Up to 20Mbps communication bandwidth is provided. Maximum distance for communication is 30m (98.4ft.)

Pure Motion Structure:

Data of 12 servo system units can be transferred within 1ms simultaneously.

Pure I/O Structure:

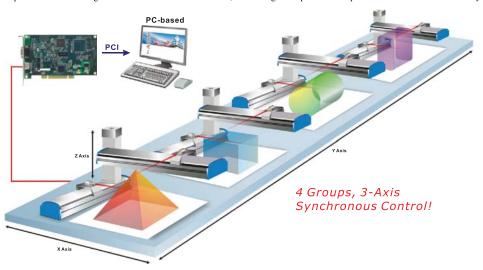

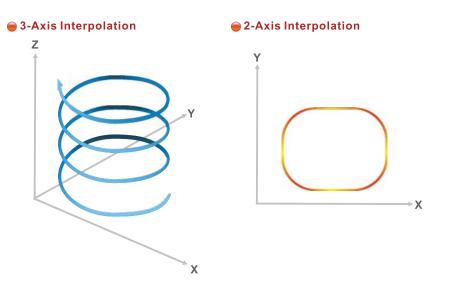

Synchronous Control

Simultaneous 3-axis linear interpolation, 2-axis are interpolation, 3-axis helical interpolation and continuous interpolation can be implemented.

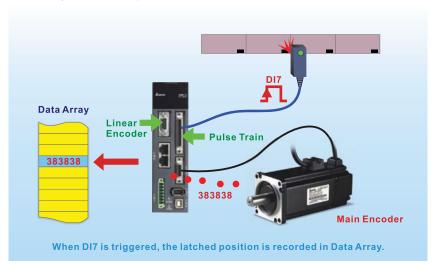

ability to control 12 servo system units or 4 groups, 3-axis interpolation algorithms synchronously. It is also capable of transferring the data of 12 servo motor units, or 768 digital inputs and outputs within 1ms simultaneously.

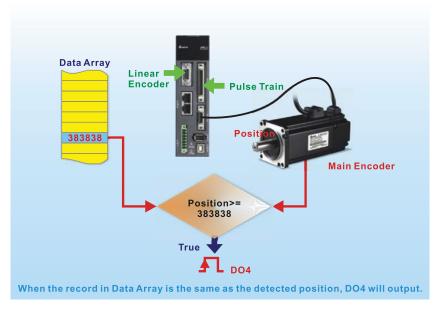

Capture (Position Latch) and Compare (Position Detection) Functions

The Capture and Compare functions can be applied to latch and detect a reference position which can be signals from the main encoder, linear encoder, or pulse train. It is possible to record 800 items with the maximum length of the data array.

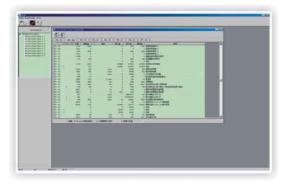

Delta Motion Control Network

EzDMC Software

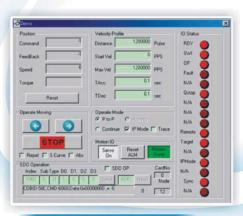

EzDMC software makes editing easier than ever and facilitates program development. Even users who use the Delta DMCNET motion control card for the first time are able to utilize the functions of this motion control card.

User-friendly Operator Interface

In EzDMC, a familiar user interface, clear images and easy-to-use dialog boxes helps users create and edit programs easily and quickly. Many example programs are contained on the CD packaged with the box. New programs are easily created just using the example programs.

Control gains can be automatically tuned to the optimum values via the servo tuning function provided in EzDMC.

Independent Control Unit

When DMCNET serial communication is setup, users can read and write into the connecting servo drives and control the system from a PC.

Multi-axis Motion Control

In EzDMC, there are many example programs available for linear, arc and helical interpolation. Users can choose different control modes such as Linear2, Linear3, Heli, Circle, Circle2 and Circle3 to easily edit and program for multi-axis control.

Real Time Response

Monitoring and displaying the status of the connected servo drives through EzDMC is easy and simple.

Delta Motion Control Network

Part Names and Functions

• LED Display / Operation Panel / Charge LED

Operation

Charge LED

LED

Display

AC 220V

■ LED Display
The 5 digit, 7 segment LED displays the servo status or fault codes.

 Operation Panel Function keys used to perform status display, monitor and diagnostic, function and parameter setting.
 Function Keys:

MODE: Press this key to select/ change mode

SHIFT: Press this key to shift cursor to the left

UP: Press this key to increase values on the display DOWN: Press this key to decrease values on the display SET: Press this key to store data

■ Charge LED

A lit LED indicates that either power is connected to the servo drive or a residual charge is present in the drive's internal power components.

• Full-Closed Control Interface

■ Used to connect linear scale and encoder for controlling A, B, Z phase signals.

• I/O Interface -

■ Used to connect Delta's DVP series PLC or other external controllers for controlling I/O signals.

• High-speed Communication Port

- Used to connect CANopen networks.
- 1-in/1-out communication ports offer easy serial connection.
- CANbus interface, supporting motion modes for CANopen DS402 implementation.

Motor Encoder Interface

■ Used to connect the encoder of the servo motor

Serial Communication Port

■ Used to connect PLC, HMI, and other controllers for RS-485 / RS-232 serial communication.

USB Connection Port

- Used to connect personal computers or notebooks.
- Ver 1.1 USB is equipped as standard.
- Direct connectivity to personal computers or notebooks, capable of accessing data through ASDA-Soft configuration software.
- Monitor speed upon software is up to 1Mbps.

- Internal & External Regenerative Resistor Terminal
- 1. When using an external resistor, connect it to $P\oplus$ and C, and ensure an open circuit between $P\oplus$ and D.
- 2. When using an internal resistor, ensure the circuit is closed between P⊕ and D, and the circuit is open between P⊕ and C. (Note: Please refer to the table of regenerative resistor specifications for the models with a built-in regenerative resistor.)
 - 3. When using an external braking unit, connect it to P⊕ and ⊖, and ensure an open circuit between P⊕ and D, and P⊕ and C
 - Control Circuit Terminal (L1c, L2c or DC24V, DC0V)
 220V Series: L1c, L2c are used to connect
 200~230Vac, 50/60Hz single-phase or
 three-phase power supply.
 400V Series: DC24V, DC0V are used to
 connect 24Vdc ±10% power supply.
 - Main Circuit Terminal (R, S, T)
 220V Series: Used to connect 200~230Vac,
 50/60Hz commercial power supply.
 400V Series: Used to connect 380~480Vac,
 50/60Hz commercial power supply.
 - When using an external braking unit, connect it to $P \oplus$ and \ominus .

• Servo Motor Output (U, V, W)

■ Used to connect servo motor. Never connect the output terminal to main circuit power as the AC drive may be damaged beyond repair if incorrect cables are connected to the output terminals.

Ground Terminal

■ Used to connect grounding wire of power supply and servo motor.

Heatsink

■ Used to secure servo drive and for heat dissipation.

Please note: *This is a Delta optional part

PCI-DMC-A01 Specifications

Items	PCI-DMC-A01
Supporting Servo Drive	Delta ASDA-A2-F series servo drives
Homing Mode	35 kinds of homing modes (set by parameters via DMCNET)
Velocity Profile	T-curve, S-curve
Interpolation Mode	Linear, Arc and Continuous
Number of Rings	1 Ring
Supporting Tool Language	VB, VC, BCB, DELPHI, C#, VB.NET
Communication Cable	Category 5e STP Ethernet cable (24AWG/4Pairs)
Communication Distance	Max. 30m (12 slave module)
Communication Interface	half duplex RS-485 with transformer isolation
PCI Specifications	ver.2.2, supports 32-bit, 3.3V/5VDC operation
Power Consumption	+5V DC at 0.5A typical
Noise Tolerance Threshold	Withstand (Peak) voltage: 1500VAC(Primary-secondary); 1500VAC(Primary-PE) ESD (IEC 61131-2, IEC 61000-4-2): 8KV Air Discharge EFT (IEC 61131-2, IEC 61000-4-4): Power Line: 2KV, Communication I/O: 1KV RS (IEC 61131-2, IEC 61000-4-3): 26MHz ~ 1GHz, 10V/m
Environment	Operating Temperature: 0°C ~ 50°C; Storage Temperature: -20°C ~ 70°C
	Humidity: 5 ~ 95% (non-condensing)

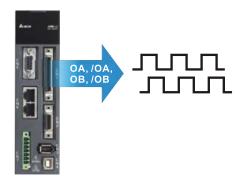

Dimensions

General Signals of Connector CN1

Signal		Pin No	Description			
Analog Monitor Output	MON1 MON2	16 15	Monitor operation status: Motor characteristics such as speed and current can be represented by analog voltages. The servo drive provides two channels which can be configured with the parameter P0-03 to output the desired characteristics. Output voltage is reference to the power ground.			
	OA /OA	21 22				
Position Pulse	OB /OB	25 23	Encoder signal output A, B, Z (Line-driver output). The motor encoder signals are available through these terminals.			
Output	OZ /OZ	50 24				
	ocz	48	Encoder signal output Z (Open-collector output).			
	VDD	17	VDD is the +24V source voltage provided by the drive. Maximum permissible current 500mA.			
Power	COM+	11 45 47 49	COM+ is the common voltage rail of the Digital Input (DI) and Digital Output (DO) signals. When using VDD, VDD should be connected to COM+. If not using VDD, users should add external applied power (+12V to +24V). The positive end of this applied power should be connected to COM+ and the negative end of this applied power should be connected to COM			
	vcc	20	VCC is a +12V power rail provided by the drive. It is used for providing simple analog commands (analog speed or analog torque command). Maximum permissible current 100mA.			
	GND	12,13, 19,44	The polarity of VCC is with respect to Ground (GND).			
Other	NC	14	The terminal marked "NC" must be left unconnected (No Connection). The NC terminal is used within the servo drive. Any outside connection to the NC terminal will result in damage to the drive and void the warranty!			

Monitoring Signals

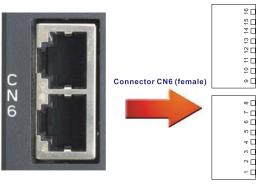

Connector CN6 for DMCNET™ Communication

The connector CN6 accepts RJ45 connectors and isolated cables for connecting Delta's motion control card directly to servo drives and host controllers (external controllers). With this connector CN6, servo drives can connect to a CMCNET™ high-speed motion control system and perform position, speed and torque control. It also can be used to read and monitor the status of the servo drives through CMCNET™ communication.

The station numbers of **DMCNET** communication are the same as RS-232 and RS-485 communication and all are determined by parameter P3-00. The transmission speed can reach up to 20Mbps. There are two communication ports for connector CN6, one is for transmission and the other is for receiving, which is convenient for direct connection of more than one servo drive in serial. Be sure to connect a 120Ω termination resistor to the last connected servo drive.

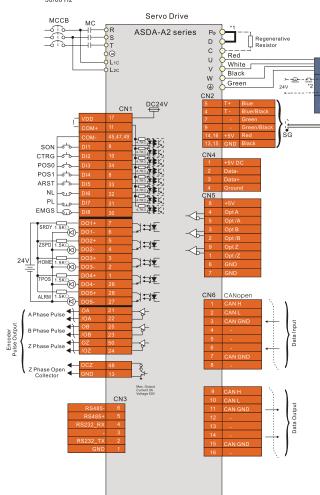

Pin No	Signal Name	Description
1, 9	DMCNET_1A	DMCNET Channel 1 bus line (+)
2, 10	DMCNET_1B	DMCNET Channel 1 bus line (-)
3, 11	DMCNET_2A	DMCNET Channel 2 bus line (+)
4, 12		Reserved
5, 13		Reserved
6, 14	DMCNET_2B	DMCNET Channel 2 bus line (-)
7, 15		Reserved
8, 16		Reserved

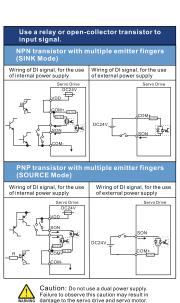

[#] Connecting method of termination resistor: Two 120Ω termination resistors are required. One is connected between DMCNET 1A and DMCNET 1B and the other is connected between DMCNET 2A and DMCNET 2B.

Standard Connection Examples for DMCNET Communication (ASDA-A2-F Series)

AC 200/230V Single-phase or Three-phase 50/60 Hz

12

NOTE

- Please refer to wiring diagrams of SINK / SOURCE mode.
- 400W and below drives do not provide
 The brake oil has no polarity.
- USB connector is for connecting to personal computers or notebooks

- *1 Rated rotation speed: When full load, speed ratio is defined as the minimum speed (the motor will not pause).
- 2 When command is rated rotation speed, the speed fluctuation rate is defined as:

 (Empty load rotation speed Full load rotation speed) / Rated rotation speed

 3 TN system: A power distribution system having one point directly earthed, the exposed conductive parts of the installation being connected to that point by a protective earth conductor.

Optional Accessories of ASDA-A2-F Servo Drives

▶ Quick Connectors

- Used for 100W to 300W servo drives
- One operating lever is provided for wire to terminal block insertion

▶ Power Cables

- 3m and 5m standard cables are available
- Customized service is offered to meet the needs of customers
- Two types are selectable:

▶ Encoder Cables

- 3m and 5m standard cables are available
- Customized service is offered to meet the needs of customers

▶ DMCNET Accessories

■ DMCNET communication cable is provided. Standard cable length is 0.5m and 1m.

► Regenerative Resistors

 \blacksquare 400W, 40 Ω and 1kW, 20 Ω
